“Why this topic?”

- Security is a very complex area, but that is no reason to take simple steps
- Not getting 100% security should not stop you trying to achieve some at least
- What is wrong with making the bad guys work harder?
- Free does not mean bad, pricey does not mean good.
- Peace of mind should not be for those with cash
- Every secure machine is one less bot/spammer/etc

“Web”

- First a decent browser – Firefox (<http://www.mozilla.com/en-US/firefox/all-beta.html>)
- Free, cross-platform, actively developed, built in patch management, etc
- Coolest thing is plugins. Ways to extend the functionality
- From a security point of view, 3 very useful additions to firefox (free)
 - Adblock Plus
 - Flashblock
 - Noscript
- Not only will you be more secure, but your browsing should be a little faster

“Email”

- Spambayes is a addon for outlook, outlook express, thunderbird, etc (<http://spambayes.sourceforge.net/>)
 - It allows for the training of a personal bayesian antispam ruleset
- GnuPG is for encryption, not just files but emails (<http://gnupg.org/download/>)
 - It allows for encryption and signing. Avalible for all OS's.
- Thunderbird is a free cross-platform email client (<http://www.mozilla.com/en-US/thunderbird/>)
 - As a mozilla project it also features plugins and patch management

“Anti-Virus”

- ClamAV is a well-known cross-platform AV engine (<http://www.clamav.org/download/>)
 - Well maintained, well used, the biggest drawback is no on-access scanning
 - But is free and used in many instances – snort, anti-spam, proxys, etc
- Comodo AV is a free non-ads windows only package (<http://antivirus.comodo.com/>)
 - While windows only, does do on-access, email, HIPS
- SpybotSD is a anti-malware windows only package (<http://www.safer-networking.org/>)
 - There are various free anti-malware tools but spybot is a front runner

“Privacy”

- Truecrypt is a cross-platform encrypted volume tool (<http://www.truecrypt.org/>)
 - Volumes can be mounted on various OS's (filesystem dependant)
 - Can use keyfiles
 - Easy key management
 - Has a Traveller mode
 - Can do pre-boot authentication under windows
- OTR (Off-The-Record) a IM Client (Pidgin) encryption plugin (<http://www.cyberpunks.ca/otr/>)
 - Pidgin is a cross platform, multi protocol IM client
 - OTR gains cross platform use through using Pidgin
- Eraser is a windows tool to do secure deletions (<http://www.heidi.ie/eraser/>)
 - Can use various “grades” of deletion
 - Plugs in windows menu options
 - Can clear the “free” space of old data

“Advanced Topics”

- “Throw Away” virtual machines
 - Use a virtual machine to do work and web browsing (<http://www.vmware.com/products/player/>)
- Localhost firewalls
 - Both OSX and Linux have builtin options
 - Windows can use Comodo Firewall (http://www.personalfirewall.comodo.com/download_firewall.html)
- Network Traffic Privacy
 - A useful option here is TOR (<http://www.torproject.org/>)
 - Cross-platform again
 - Used for anonymity of traffic
- Virtual Private Network
 - OpenVPN is a SSL-based VPN (<http://openvpn.net/>)
 - Both server and client are cross platform
